Microtremor H/V spectral ratio

f_0 (mt) (Hz)

Site classification (EC8 – NTC2008)

Lithostratigraphic classification

Estimated

Method ¹	Soil class ²	Notes
GEO	A*	

1	GEO	Geological data
Legend	EC	Empirical correlation
	HV	H/V spectral ratio

Based on in-situ measurements

Method ³	V_{s30} (m/s)	Soil class ²

2	A	Rock or other rock-like geological formation, including at most 5 m of weaker material at the surface ($V_{s30} > 800$ m/s).
Legend	B	Deposits of very dense sand, gravel, or very stiff clay, at least several tens of m in thickness, characterized by a gradual increase of mechanical properties with depth ($V_{s30} = 360-800$ m/s).
	C	Deep deposits of dense or medium dense sand, gravel or stiff clay with thickness from several tens to many hundreds of m ($V_{s30} = 180-360$ m/s).
	D	Deposits of loose-to-medium cohesionless soil (with or without some soft cohesive layers), or of predominantly soft-to-firm cohesive soil ($V_{s30} < 180$ m/s).
	E	A soil profile consisting of a surface alluvium layer with V_s values of type C or D and thickness varying between about 5 m and 20 m, underlain by stiffer material with $V_s > 800$ m/s.

3	CH	Cross-Hole
Legend	DH	Down-Hole
	ES	ESAC
	FK	FK
	MW	MASW
	NW	NASW
	SH	SH-Refraction
	SW	SASW
	—	—

Topography classification

Topography category ⁴

4	T1	Flat surface, isolated slopes and cliffs with average slope angle $i \leq 15^\circ$.
Legend	T2	Slopes with average slope angle $i > 15^\circ$.
	T3	Ridges with crest width significantly less than the base width and average slope angle $15^\circ \leq i \leq 30^\circ$.
	T4	Ridges with crest width significantly less than the base width and average slope angle $i > 30^\circ$.

Synthesis of information

Information relevant to site classification

Notes

V_{s30} (m/s)		
Average N_{SPT} to 30m	0.0	
Average c_u to 30m (kPa)	0.0	
Site class (EC8 – NTC2008)	A*	
Topography category (EC8 – NTC2008)		

Geological, geomorphological and geomechanical information

Lithology	Rock, Eocene Flysh	
Morphology	Slope	
Rock mass		

Other information relevant to seismic site response

Depth to bedrock (m)	0.0	
Average V_s to bedrock (m/s)	0.0	
f_0 from H/V microtremors (Hz)	0.0	
f_0 from H/V earthquakes (Hz)	0.0	

Distinctive features of site response
